SNAP-VAC TECHNOLOGY

Patented by PACE Snap-Vac technology extends vacuum time by 1.2 sec.

It is the optimal time to ensure that all of the molten solder is pulled from the joint and is pulled back into the collection chamber before it solidifies to prevent tip clogging and pad damaging.

Snap-Vac technology significantly extends life of tips as well as the device itself.

i

The key advantage of Tip-Heater Cartridge based technology is that its advanced electronics provide instantaneous load sensing and on-demand power to quickly reflow solder joints, regardless of the mass of the application. Further, the position of the control sensor is as far forward as possible to immediately respond to the thermal demand of the work. The tip and heater are permanently coupled, ensuring all the heat generated by the heater is available for use by the tip. For applications where the work cycle is high and for micro-miniature applications the direct power approach is ideal as the thermal demand is continuously monitored and the heater responds immediately by providing adequate power to meet the demand from the work, without overshoot

REMOVAL OF SURFACE MOUNTED DEVICES SMD

The unique design of the SC-7000Z desoldering tool allows for the quick conversion from a solder suction tool to a hot blower. By using the hot blower with the SMD kit (DL-72-78-00), the SMD will be easily removed from PCB's. The change to hot blower requires:

- Remove the Suction tip and replace with hot Blow nozzle by a wrench
- Replace the original cartridge with the hot blow filter pipe
- Set the lever to hot blow position.

The air flow of the hot-blow can be adjusted with the lever.

- Depending on the nature of the suction work and the size of the component, the temperature control knob should be set at the appropriate level (450°C-500°C)

REMOVAL OF PLCC

PACE KIT: ST-350 CONVECTIVE REWORK CENTER

PC-80070438

DESCRIPTION

- Completely self-contained, programmable and capable of installing virtually any type of surface mount component.

The system is ideal for service centers, prototyping shops, low volume production or remanufacturing centers.

- ST 350 has all of the process control built into the unit and boasts digital controls for temperature, time, and airflow. The electronic controls are fully integrated and are simple to use and program to meet your needs, unlike the 'off the shelf PID control modules' used on competitive equipment.

This means that you can 'set it and forget it' instead of being tied to the unit to perform tasks during the process which can be more than 6 minutes long! Your time can be better spent preparing for the next operation than waiting to activate non-intergrated control modules.

- System can be used in either manual or 'timed' modes. Manual mode means that the system generates airflow when the cycle button is pressed the first time. When pressed a second time, the system shuts off. 'Timed' modes allow the operator to set up 'Profiles' that consist of time and temperature parameters to ensure process control and repeatability.

All of the interface controls for the ST 350 are also located in a remote control box that can be placed on either side of the unit for maximum convenience.

HELLER MARK III REFLOW OVENS

- New Frame**
 More than simply beautiful, this new frame utilizes twice the insulation.
 This modification alone, reduces heat loss and saves up to 40% on electricity costs!
- Enhanced Heater Modules**
 Enhanced heater modules 'blanket' the PCB with heat for the lowest ΔT s on the toughest boards!
 Additionally, the Uniform Gas Management system eliminates 'net flow' which results in nitrogen consumption reductions of up to 40%!
- Heater modules for Heller ovens**
 Heller's 10" (250mm) long heater modules are 2" (50mm) narrower than our competitors so we can provide more modules than anyone in the industry! More modules means more process control and a 17% lower liquid time for the tightest tolerances of all!
- Fastest Cooling rates**
 The new blow thru cooling module provides cool rates of $>3^{\circ}\text{C}/\text{Sec}$ — even on LGA 775!
 That rate meets even the most demanding Lead-Free Profile requirements!
- Ultra-Parallel Conveyor System**
 Four (4) lead screws ensures the tightest tolerances and parallelism — even on boards with 3mm clearance at the edges!
- New 'Cool Pipe' Flux System Virtually eliminates Maintenance**
 Our new 'Cool Pipe' flux collection system traps the flux in collection jars that can easily be removed and replaced while the oven is running—thus saving time consuming P.M. Additionally, our proprietary 'Flux Free Grill System' limits flux residue on the cooling grills—the result is not only reduced maintenance time, but recaptured production time—thus giving the Heller system the highest production yields of any oven!
- Process Control**
 Powered by ECD, this innovative software package provides three levels of process control from Oven CpK, to Process CpK and Product Traceability, this software ensures that all parameters are optimized and SPC reporting is fast and easy

VACUUM

HELLER Industries has developed a vacuum module that inserts directly in its reflow oven line to meet new rising demand of high volume, void-free, automated inline soldering.

Vacuum module can be inserted in zone directly after reflow peak (liquidus) has occurred or an IR Panel can be added to the chamber to reach reflow peak under vacuum.

Convection reflow with vacuum module is continuous and allows thermal profiles to be directly ported from non-vacuum reflow applications to achieve low COO and high UPH.

- HELLER Industries utilizes advanced pumping package with high capacity for fast pump down time.

- HELLER Industries provides optimized cycle (average 30s-60s) to achieve super high UPH.

- Reflow time under vacuum of 15 seconds was able to achieve <1% total void area spec.

- Heller vacuum assisted reflow applies multi-zones to meet various thermal profile requirements.
- Heller adopts high efficient flux collection system to collect the flux and keep tunnel clean. On-the-fly maintenance is available.
- Chamber exhaust foreline, ball valve, butterfly valve and dry vacuum pump are heated to 150°C to eliminate flux condensation.

**SOLDERSTAR DELTAPROBE**

SS-R-1004

DESCRIPTION

- The SolderStar DeltaProbe removes the need to use fragile test boards for periodic profiling required for ongoing control of the reflow process
- With fixed sensors and no test card or long trailing wires, the DeltaProbe is a fixed, robust and convenient platform for generating highly repeatable results
- Although process setup requires a temperature profile captured from a real test PCB, ongoing process monitoring can be achieved by measuring the difference from an established process baseline
- Periodically the DeltaProbe is passed through the process to allow rapid checks against the baseline profile and SPC data to be captured. Process change, due to variations in convection levels, conveyor speed or zone setpoints, is instantly and accurately detected and the operator is notified visually
- Advanced SPC tools allow the operator to produce process control charts for ongoing process control measurement, evaluation and corrective action

A 'GOLDEN PROFILE' FOR EACH PROCESS IS ESTABLISHED IN 3 EASY STEPS

- The optimum oven settings are first established by product profile capture and simulation
- The DeltaProbe is then passed through the reflow oven to capture a 'golden process profile'
- Tolerance limits can now be set around temperature traces and process parameters

ERROR CONDITIONS DETECTED

- Incorrect oven profile loading
- Unauthorised change of oven profile settings
- Conveyor speed errors
- Setpoint & convection level errors

Safety light curtains ensure a safe work environment in potentially high-risk areas.

Invisible safety field ensures protection in potentially hazardous areas. Disruption of the light beams results in immediate execution of a safe emergency stop.

Thanks to its slim design, the light curtains provide an ergonomic working environment for space-saving applications.

The curtains are integrated into the robot, which in case of human interference during robot work, leads to immediate shutdown of the robot.

- Possibility of integration with workplaces

INDIVIDUAL SOLUTIONS

To ensure work ergonomics, it is necessary to design a project with planned transportation system. Considering such necessity, at the design stage, we offer to tailor the system to application, weight and dimensions of goods and characteristics of environment.

Electronic industry has a large number of small components, requiring precision transport and short production cycle.

For these reasons, production lines should be optimally configured. Therefore, the project includes not only production phases, but also inspection and service stands as well as specific storage requirements of product sensitive to electrostatic discharges (ESD).

PIERGIACOMI CUTTERS

Cutters are mainly intended for use in the electronics industry.

They are used to cut off the leads of components located on long-range PCBs.

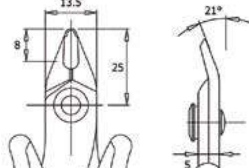

Tools have a different form of cutting and the possibility of simultaneous embossment of leads. Each of the offered cutters has information about the maximum thickness of the cut tool.

Failure to follow these guidelines may result in damage to the tool.

LINDSTRÖM CUTTERS

The tools are made of chrome-plated bearing steel, which uses forging technology to preserve the internal structure of the material.

Most of the cutters are equipped with special antistatic handles to protect the cut parts from the destructive effect of electrostatic charge.

PIERGIACOMI TWEEZERS

PIERGIACOMI tweezers are widely used in many branches of industry – wherever precision is required, e.g. electronics, precision mechanics.

The tweezers differ from each other:

- the shape of the tip
- type of cutter: internal or external

The tweezers marked with the R symbol have a self-locking mechanism. Most of the tweezers are made of antimagnetic materials, and acid resistant, there are also nickel and nylon tweezers, and Teflon coated.

ANTISTATIC FOOTWEAR

Comfortable and aesthetic antistatic footwear provides an efficient and comfortable way to discharge electrostatic charges generated by humans.

The EN-PN 61340-5-1 norm requires that the resistance level to grounding should be within 50k Ω - 100M Ω range.

When using ESD shoes / floor as the basic grounding for employees, the resistance level should be within 750k Ω - 35M Ω range.

Electrical resistance of ESD footwear should be measured between the operator's hands and the metal base on which he must stand on with both legs. For new shoes, it is recommended to use them for at least 30 minutes before the first test. For a periodic inspection, 5 minutes of use is sufficient to obtain a reliable result.

THE COLOREX SYSTEM

Colorex is available with two levels of conductivity - High performance (EC range) and Performance (SD range). There is also a choice of fitting as Colorex can be installed by fully adhering it directly to a subfloor or by bonding it to a raised access floor panel. It can also be laid as part of a loose lay tile system.

3 METHODS INSTALLATION OF COLOREX

COLOREX GLUED DIRECTLY TO THE FLOOR

Colorex can be installed onto a solid subfloor. When conductive properties are required, this should be done by firstly using a conductive primer after which copper tape, connected to an earth point, and conductive adhesive is applied.

When Colorex is installed using this process, the static charged is drained to earth via the earthing point. When conductivity is not required a standard primer and adhesive can be used.

When Installed on solid floors, Colorex can withstand heavy loads such as fork lift trucks without being damaged. The welding of Colorex tiles is optional for ESD areas however, is a requirement for cleanrooms.

COLOREX ON TOP OF A RAISED FLOOR PANEL

Often Colorex is bonded to a raised access floor panel that can be used in cleanrooms or data centres.

Due to the strength and unique properties of Colorex, it is suitable for use on all formats of raised access floor panels, including those designed to withstand the heavy point loading found in data centres.

Since Colorex has extremely low emissions and a high density, it can be perforated for air flow systems that are often used in combination with raised access floors.

COLOREX WITHOUT THE USE OF GLUE

Colorex plus is a high performance floor covering system consisting of loose lay tiles for all areas of application where expensive sub floor preparation or downtime is an issue.

Colorex plus can be installed without disruption of activities and it can be used immediately after installation, even by fork lift trucks. The unique honeycomb structure on the underside of Colorex plus allows damp floors to be ventilated during use.

Colorex plus tiles offer all the benefits associated with Colorex along with a unique dovetail system that remains hidden under the surface.

We provide the access to modern, very affordable technology and engineers with many years of experience in the design and construction of CleanRoom and CleanBox areas.

For both solutions we are able to carry out all the necessary work - from planning, to construction and continued maintenance of the zone. Our team has extensive work experience resulting from numerous training courses and implementation of previous projects, so we can guarantee diligence at work and reliability of execution.

CLEANROOM CONSTRUCTION

An area with a predetermined way of controlling pollution from particles and micro-organisms in the environment, built and used in a way that limits the entry, generation and accumulation of pollution.

CLEANBOX CONSTRUCTION

A separate clean zone created with a mobile construction installed inside the room, manufacturing hall or Clean Room area.

PLANNING

During the planning phase we deliberately take into account the smallest details, which are verified many times.

CONSTRUCTION

Teams with extensive work experience guarantee diligence and reliability of execution.

EQUIPMENT

We offer a wide range of high quality products designed primarily to equip cleanroom areas.

THE HIGHEST QUALITY OF SERVICES

We invite you to our headquarters, where you can learn more about the creation process for clean zones.
